

AmarVote

VOTER MANUAL

Vote with confidence, verify with proof.

A complete, step-by-step guide to registering, casting an end-to-end verifiable ballot, and confirming it was counted — exactly as cast.

 End-to-end encrypted

✓ Independently verifiable

YOUR JOURNEY

Six steps, start to finish

Everything in this manual fits into one simple path. Jump to any section directly, or follow it in order the first time you vote.

1

Create your account

Part 1

Verify your voter email, confirm a one-time code, and set a strong password.

2

Secure your account (optional)

Part 2

Turn on two-step verification for an extra layer of protection.

3

Reset your password

Part 3

If you forget your password, reset it by verifying your email address

4

Find your election

Part 4

Locate your election by search, menu, or dashboard.

5

Cast your ballot

Part 5

Pick candidates, encrypt your choices, optionally audit them, then cast.

6

Verify the result

Part 6

After the election closes, confirm your exact ballot was counted — by you, independently.

i

Takes about 5 minutes

ii

No technical knowledge
needed

iii

Your vote stays private

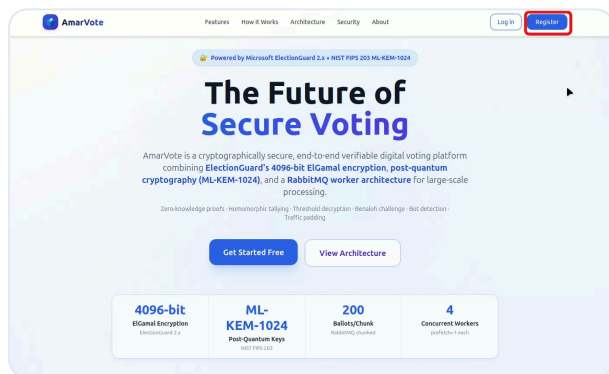

TIP

Throughout this guide, screenshots show exactly what you'll see on screen. Look for the numbered indigo badges — they match the step described beside each image.

Create your account

Registration confirms you're on the official voter list before anything else happens. You'll verify your email, set a password, and land straight on your dashboard.

1.1 Open the registration page

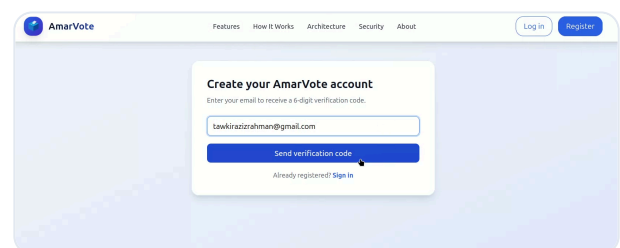

1 Start from the home page

On the AmarVote home page, click **Register** in the top-right corner to begin creating your account.

1.2 Verify your voter email

2 Enter your official email

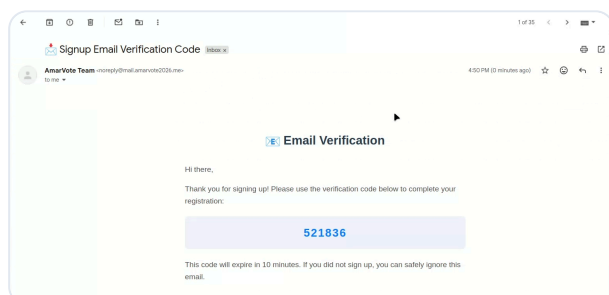

Enter the email address listed for you on the official voter list. AmarVote only grants access to addresses already on this list, so use the one your election authority has on file — not a personal alternative.

NOTE

Using an email that isn't on the official voter list will not pass verification. If you're unsure which address is registered, contact your Election Officials before continuing.

1.3 Confirm with a one-time code

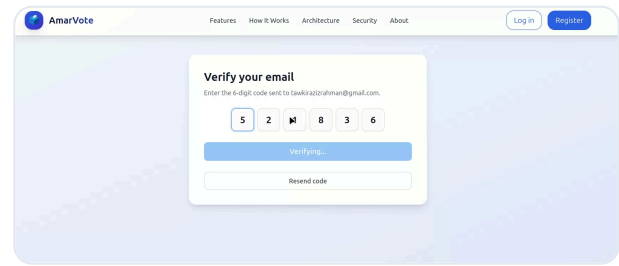

3 Check your inbox

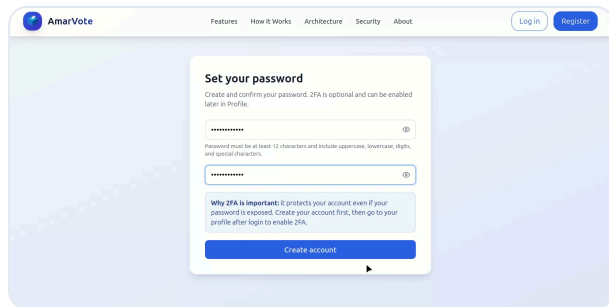

AmarVote emails a 6-digit verification code to the address you entered. It usually arrives within moments — check your spam folder if you don't see it right away.

4 Enter the code

Type the 6-digit code into the verification field to confirm you own this email address.

1.4 Set a strong password

5 Choose your password

Create a password of **at least 12 characters**, combining uppercase letters, lowercase letters, numbers, and special characters. This protects your account from being accessed by anyone else.

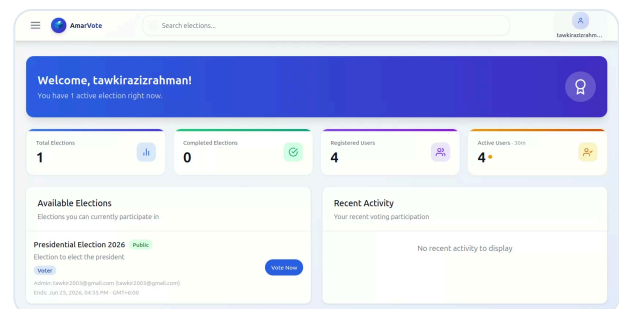

TIP

A password manager makes this easy: generate a long, random password once and let it remember the rest.

1.5 You're in

6 Your dashboard is ready

As soon as your password is set, AmarVote signs you in automatically and opens your personal dashboard. Registration is complete.

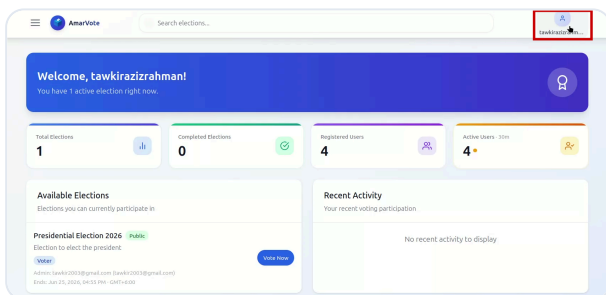

PART 02

Secure your account

Two-step verification is optional but strongly recommended. It adds a second, time-based code on top of your password, so a leaked password alone isn't enough to sign in as you.

2.1 Open security settings

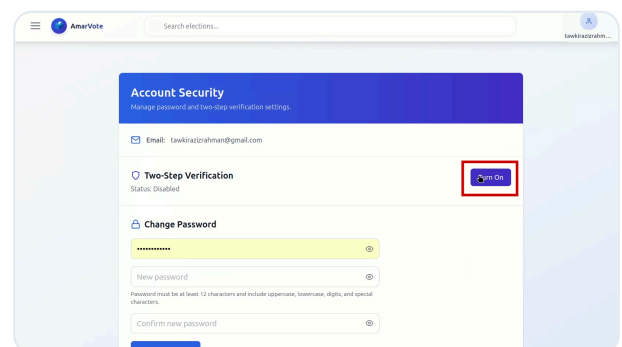

1 Go to your profile

From your dashboard, click your **profile icon** in the top-right corner to open your account settings.

2.2 Turn on two-step verification

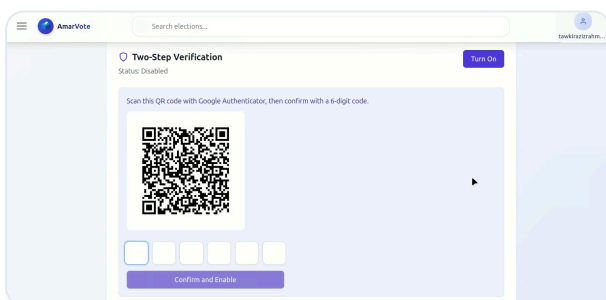

2 Enable two-step verification

In the **Two-Step Verification** panel, click **Turn On** to begin setup.

3 Scan the QR code

Open an authenticator app (such as Google Authenticator) on your phone, scan the QR code shown on screen, and enter the 6-digit code it generates to confirm the link.

VERIFIED

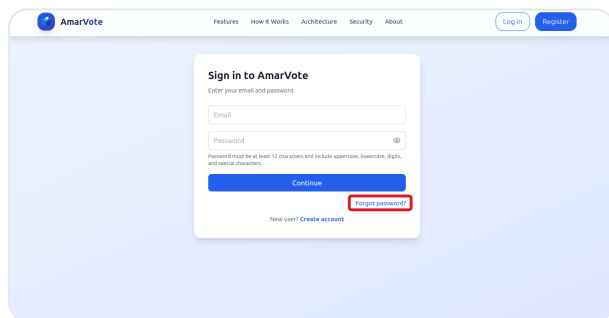

Two-step verification is now active on your account. From your next login onward, you'll need both your password and a fresh code from your authenticator app.

PART 03

Reset your password

If you no longer remember your password, reset it from the login page. You'll verify your registered email, enter a one-time code, and choose a new password.

3.1 Forgot your password?

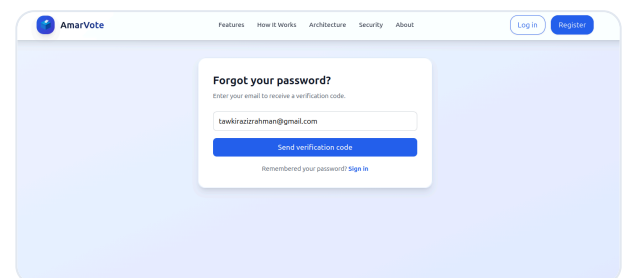

1 Click Forgot Password?

On the login page, click **Forgot Password?** to start the reset process.

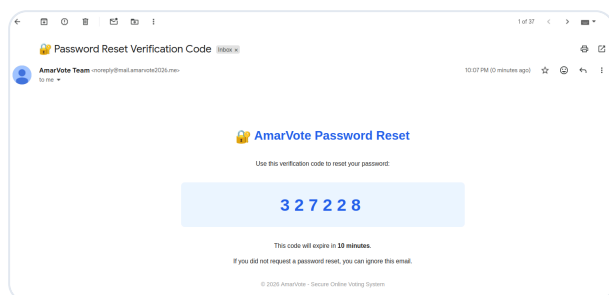

2 Enter your registered email

Enter the email address you used when you registered with AmarVote.

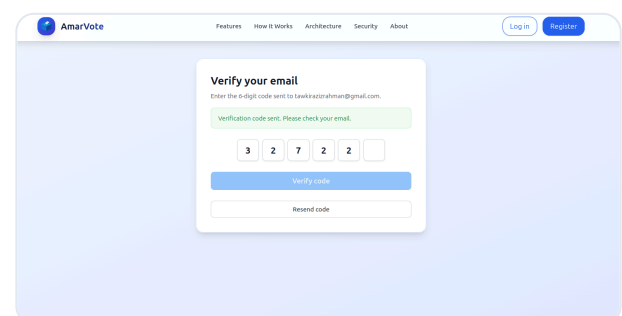

3 Check your inbox

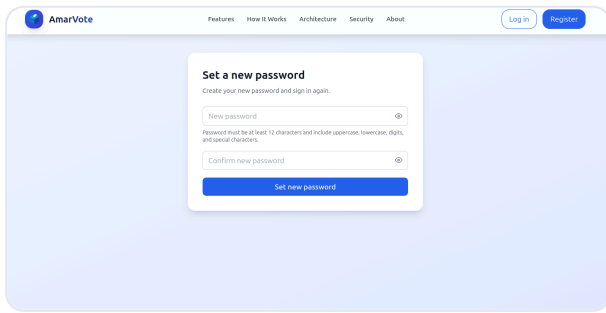

AmarVote sends a 6-digit code to that email address. Check your inbox — and your spam folder if you don't see it right away.

4 Enter the code

Type the 6-digit code into the verification field to confirm your identity.

The screenshot shows the AmarVote website's 'Set a new password' form. The form is titled 'Set a new password' and includes the instruction 'Create your new password and sign in again.' It features two input fields: 'New password' and 'Confirm new password'. Below the 'New password' field, there is a note: 'Password must be at least 12 characters and include uppercase, lowercase, digits, and special characters.' A blue button labeled 'Set new password' is positioned at the bottom of the form. The website's header includes the AmarVote logo, navigation links for 'Features', 'How it Works', 'Architecture', 'Security', and 'About', and buttons for 'Log in' and 'Register'.

5 Set a new password

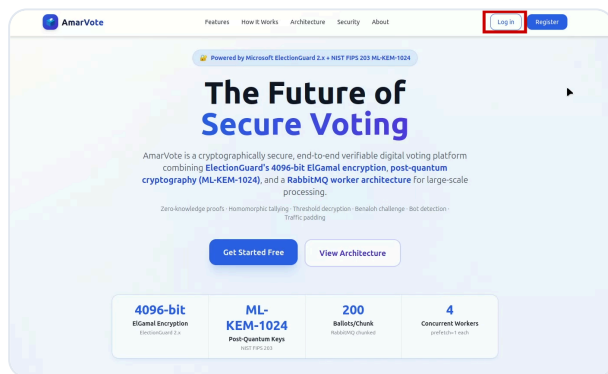

Choose a new password of **at least 12 characters**, combining uppercase letters, lowercase letters, numbers, and special characters. Then sign in with your new password.

PART 04

Find your election

Once registered, returning to vote is quick. This section also covers the three ways to locate an election: your dashboard, the search bar, and the full elections directory.

4.1 Sign in

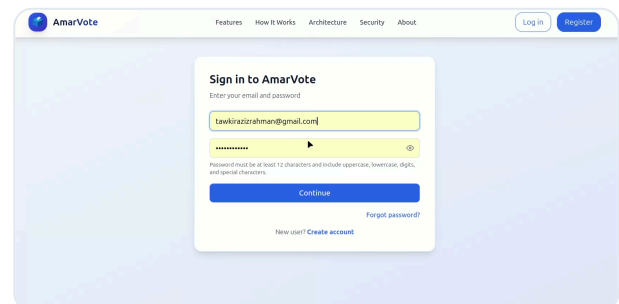

1 Open the login page

From the home page, click **Log in** in the top-right corner.

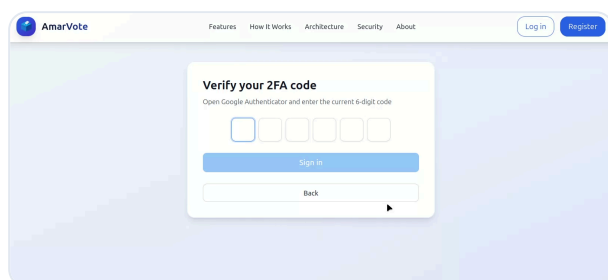

2 Enter your credentials

Enter the email and password you registered with, then continue.

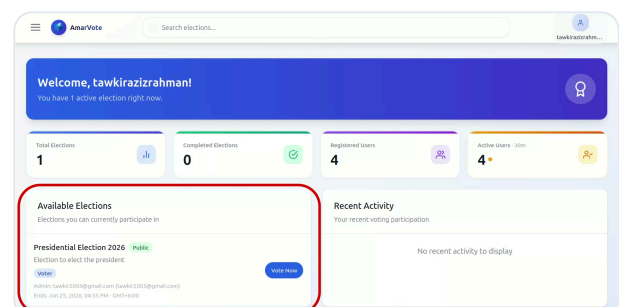

3 Confirm with your authenticator

If you enabled two-ste verification, enter the current code shown in your authenticator app to finish signing in.

4 You are in

You are now signed in. You can browse the platform and cast your vote in any election you are eligible for.

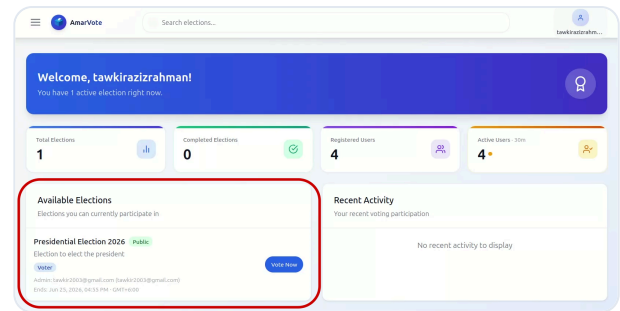

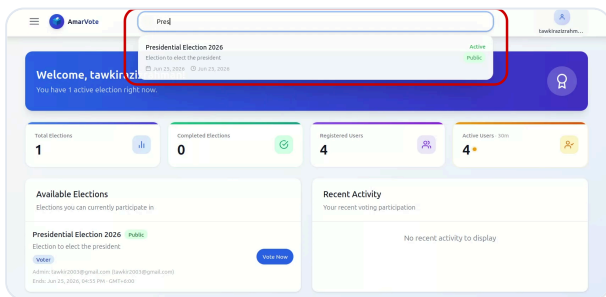

4.2 Find your election

There are three equally valid ways to reach an election — use whichever is fastest for you.

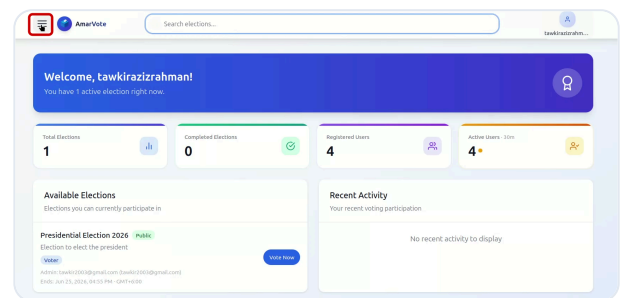

5 Browse from your dashboard

Active elections you're eligible for appear directly on your dashboard. Click any election card to open it.

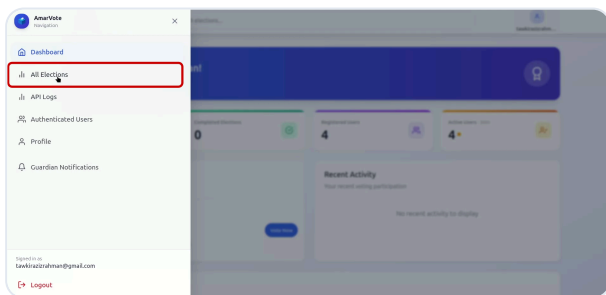

6 Or search by name

Use the search bar at the top of the page to find an election by typing its name.

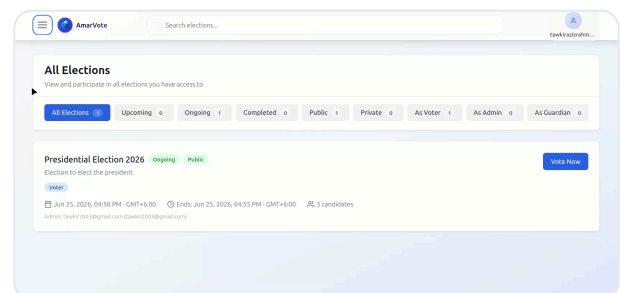

7 Or browse the full directory — open the menu

Click the menu icon in the top-left corner to open the navigation panel.

8 Select "All Elections"

Choose **All Elections** from the menu to see every election you can take part in.

9 Pick your election

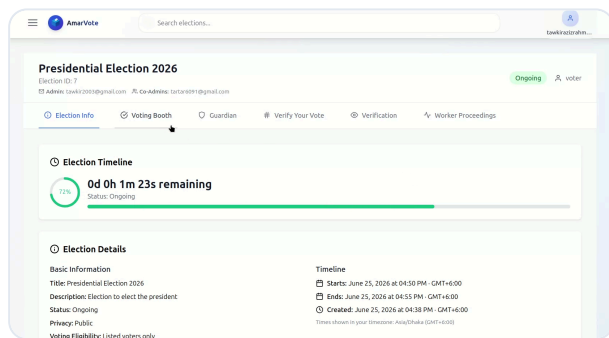

Browse the complete list and click the election you want to vote in.

PART 05

Cast your ballot

This is the core of AmarVote: your selections are mathematically encrypted, you decide what happens to that encrypted ballot, and only a cast ballot is ever counted.

5.1 Review the election

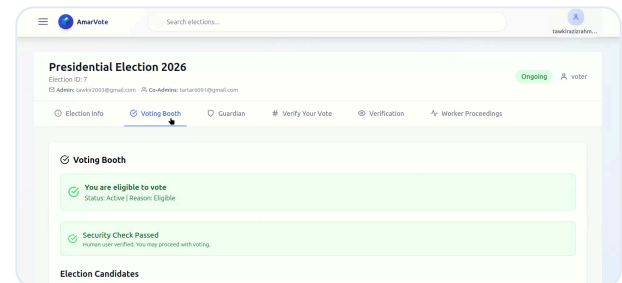

1 Open the election page

Here you'll find key details about the election — timeline, rules, and instructions — before you vote.

5.2 Enter the voting booth

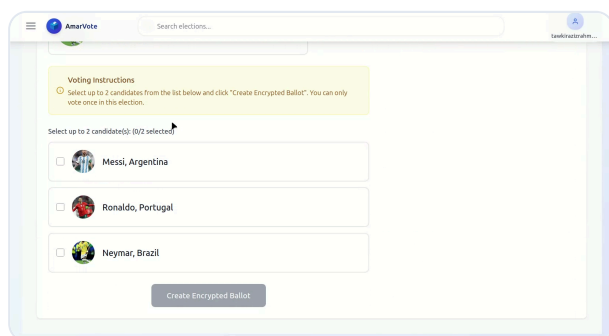

2 Go to the Voting Booth tab

Switch to the **Voting Booth** tab at the top of the election page.

3 Scroll to see all candidates

Scroll down to view the complete candidate list before making your selection.

5.3 Make your selection

4 Select candidates and encrypt

Select up to the number of candidates allowed for this election, then click **Create Encrypted Ballot**. Your choices are encrypted before being stored in the database, so no plain text choice are stored in the database.

Voting Instructions

Select up to 2 candidates from the list below and click "Create Encrypted Ballot". You can only vote once in this election.

Select up to 2 candidate(s): (2/2 selected)

- ☐ Messi, Argentina
- ☒ Ronaldo, Portugal
- ☒ Neymar, Brazil

✓ Cast Vote

Challenge Vote

Discard Ballot

During periods of high traffic, casting your vote or verifying your ballot may take a little longer than usual. Please remain on this page and allow the process to complete.

5 Cast, challenge, or discard

Every encrypted ballot gives you three options:

- **Cast Vote** — submit this ballot to be counted.
- **Challenge Vote** — audit it to confirm it was encrypted correctly (see below).
- **Discard Ballot** — throw it away and start over.

TIP

You can create and challenge as many encrypted ballots as you like. Only a ballot you choose to **cast** is ever counted — challenging or discarding never submits a vote.

5.5 Cast your vote

From encryption to receipt

When you're satisfied with your ballot, cast it to submit your vote and receive proof of submission.

- ## 1. Encrypt your ballot

Voting Instructions

Select up to 2 candidates from the list below and click "Create Encrypted Ballot". You can only vote once in this election.

Select up to 2 candidate(s): (2/2 selected)

☐  Messi, Argentina

☒  Ronaldo, Portugal

☒  Neymar, Brazil

[Create Encrypted Ballot](#)

READY

- ## 2. Cast your vote

SUBMIT

- ### 3. Get your receipt

RECEIPT ISSUED

VERIFIED

Your vote is cast. AmarVote returns a unique tracking code and ballot hash — your personal proof that this exact ballot was received.

5.6 Save your receipt

The screenshot displays a web application for a voting system. At the top, a navigation bar contains links for 'Home', 'About', 'Voting', and 'Results'. Below this, a sidebar on the left outlines the voting process: 'You have already voted in this election' (Status: Active | Reason: Already voted), 'Security Check Passed' (New voter added: Voting process will start soon), and 'Election Candidates' (Messi, Argentina; Neymar, Brazil). The main content area shows a 'Vote Cast Successfully' confirmation modal. This modal includes a checkmark icon, the text 'Your vote has been securely recorded. See your tracking code and hash below.', the 'Vote Hash: 8239E8E877A918C381D80FC4D584687E5A86522', the 'Tracking Code: 76K3VCv38P1158kx18M88FwC3P156b3e75cm3T', and two buttons: 'See TEXT' and 'See QR'. An 'Important' note at the bottom of the modal states: 'Note your vote hash and tracking code to verify your vote when results are published.' A 'Return to Voting Booth' link is located at the bottom of the modal. In the top right corner, there is a notification for a 'New release: Presidential Race - "Secret" results' with a 'Download' button.

- ## 6 Download your receipt

Download your tracking code and ballot hash. Keep this safe — it's necessary to verify your specific ballot later, and it never reveals who or what you voted for.

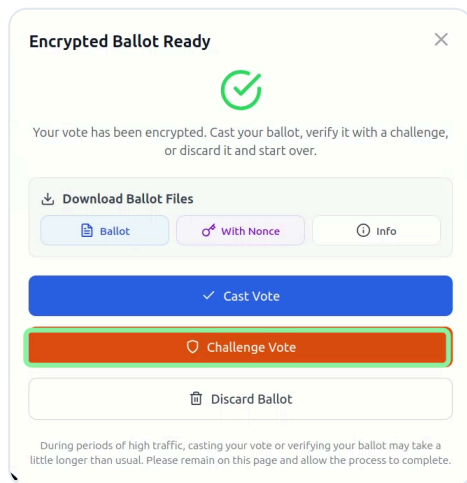

- ## 7 Check your email too

AmarVote also sends a copy of your receipt to your registered email, so you have a backup record.

A screenshot of an email interface. At the top, there are navigation icons and a status bar showing '1 of 16' and '100%' zoom. The email header shows 'Your AmarVote Receipt - Presidential Election 2026' with a 'Block' button. The sender is 'AmarVote Team' with the email address 'nrcnp1@mail.amarvote2026.me'. The email content states: 'Your vote was cast successfully. Your receipt is attached as a TXT file. Please keep it for verification. Tracking Code: 7a3c3c30f11f691b8994a3f15a3b37c3ae274db2b3a3b5c6556a30f'. Below the text, there is a section for 'One attachment - Scanned by Gmail' with an 'Add to Drive' button. The attachment is a file named 'vote_receipt_presidentia...l_election_2026_receipt_on_7_3a3c3c30f11f69' with a size of '1 KB'. At the bottom, there are 'Reply' and 'Forward' buttons.

5.7 Optional: Challenge your vote

Challenging lets you prove an encrypted ballot truly matches the choices you made — without revealing your vote to anyone else. Click **Challenge Vote**, then re-select the candidates to check against. Challenge is a practice verification step done **before** casting. It lets you check that encryption was honest. Challenged ballots are never counted.

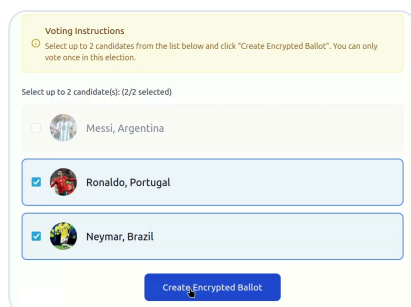

8 Select Challenge Vote

Choose the candidates you want to check the encrypted ballot against, then challenge the ballot.

If your choices match

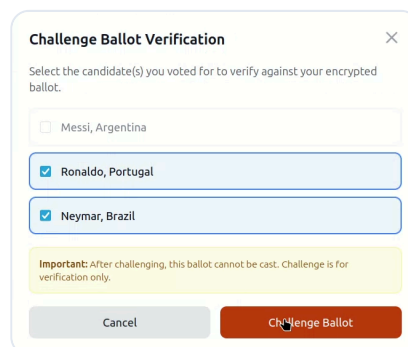

Challenging with the same choices used to create the ballot reveals a confirmed match.

Original ballot

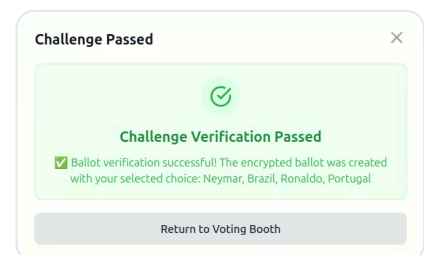

ENCRYPTED

Challenge choice

SAME CHOICE

Result

MATCH

VERIFIED

Match confirmed. The encrypted ballot accurately reflects the candidates you selected.

If your choices differ

Challenging with different choices than the original ballot reveals a mismatch.

Challenge Ballot Verification

Select the candidate(s) you voted for to verify against your encrypted ballot.

- ☒ Messi, Argentina
- ☒ Ronaldo, Portugal
- ☐ Neymar, Brazil

Important: After challenging, this ballot cannot be cast. Challenge is for verification only.

Cancel Challenge Ballot

DIFFERENT CHOICE

Result

Challenge Failed

Challenge Verification Failed

WARNING: Ballot verification failed! The encrypted ballot does NOT match your selected choice. This indicates a potential security issue. Please contact the election administrators immediately.

Return to Voting Booth

NO MATCH

NOTE

No match — and that's correct. This confirms the system honestly reports mismatches rather than hiding them.

NOTE

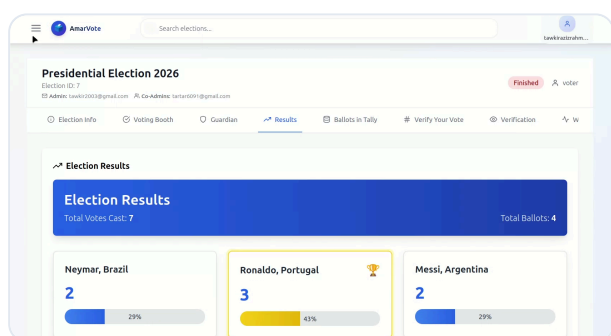

A challenged ballot is **always discarded**, regardless of the result. This is intentional: once you've used a ballot to verify the encryption, that same ballot can no longer be cast. Return to the voting booth and create a fresh encrypted ballot when you're ready to vote for real.

PART 06

Verify the result

Once the election closes and results are decrypted, you can confirm — independently — that your exact ballot was included in the final tally, untouched.

6.1 See the outcome

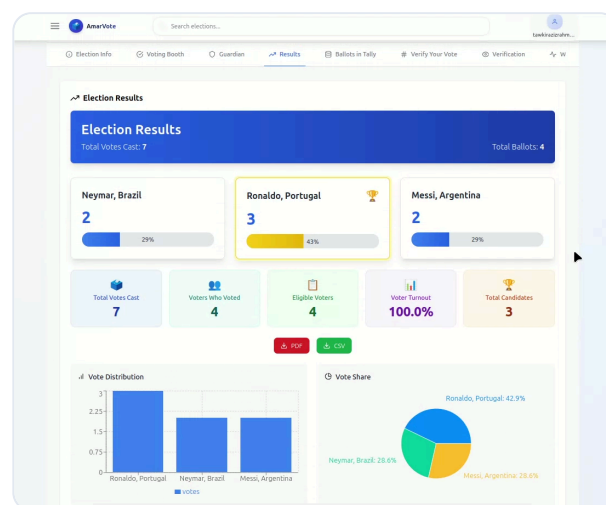

1 Open the Results tab

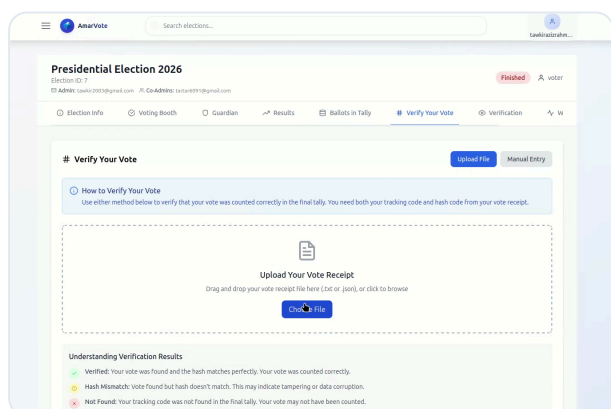

After decryption is complete, open the **Results** tab on the election page to see the outcome.

2 Explore the detailed breakdown

Scroll down for detailed charts and a full breakdown of votes per candidate.

6.2 Verify your own ballot

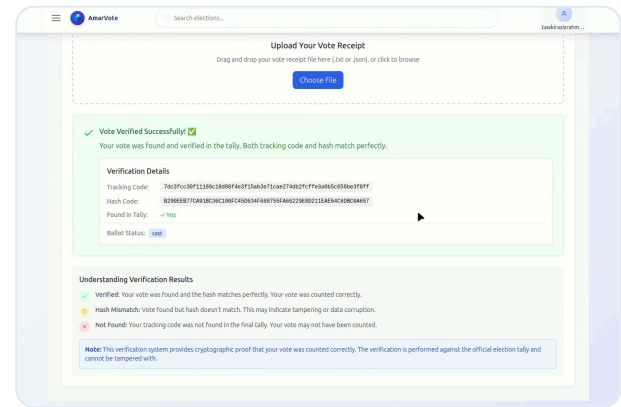

3 Upload your receipt

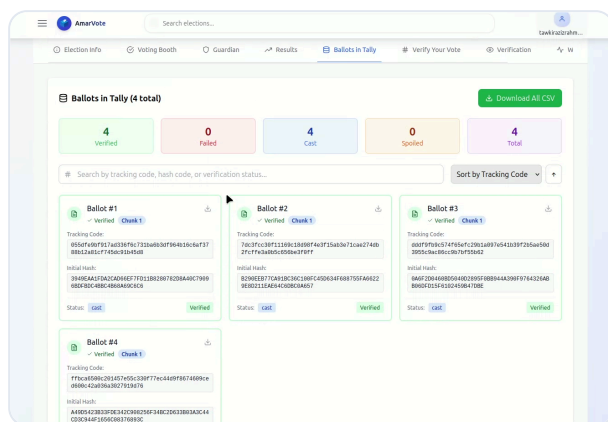

Go to the **Verify Your Vote** tab and upload the receipt file you saved earlier or received in your email.

4 Confirm the match

AmarVote locates the ballot in the public tally with your exact tracking code and confirms its hash matches your receipt — proof your vote was counted exactly as cast.

6.3 Explore the public tally

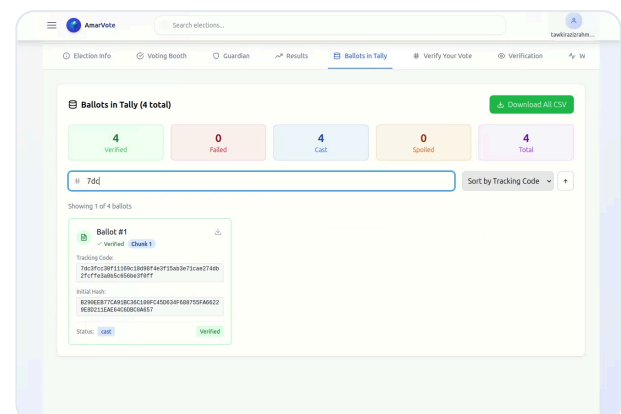

5 Browse every cast ballot

The **Ballots in Tally** tab lists every encrypted ballot included in the count — anonymized, but fully public and auditable by anyone.

6 Or search by tracking code

Prefer to check by hand? Search for your tracking code directly in the tally and compare the ballot hash yourself.

VERIFIED

This is what makes AmarVote **end-to-end verifiable**: you don't have to trust the system blindly. Every cast ballot, your receipt, and the final tally can all be checked against each other — by you.
